

StormRunner Functional 1.4 Field Enablement

Scenario #3

Customer: **HealthHill** is an award-winning health provider. They offer a wide variety of health plans and services which enable affordable access to quality health care. They have a single testing department responsible for testing all applications. Their main focus is testing their web applications (both internal and customer facing) together with some other non-web technologies: SAPGUI, Oracle and TE. They are planning to deliver a new mobile application in the next 12-18 month

HEALTHHILL

1. Build a demo based on the information collected from previous discovery call

Scenario Description:

- Currently using Azure to manage their test lab
 - HealthHill manage over 800 images themselves (installations, patches, licenses, etc.)
 - Currently using Sprinter, UFT, ALM and Selenium
 - In 6 months Central IT will change the firewall rules and Azure will be inaccessible for them.
 - They're looking for a platform that will accommodate manual and automated testing for their browser application as well as their upcoming mobile app
2. Based on the above information and demo, provide an optimized bundle and costs for the account.
